Amendments to the Claims:

1. (Currently Amended) A method comprising  
receiving an electronic document represented by serial data that contains content of the document and defines an order in which respective portions of the content are to be performed presented on a display for viewing,  
analyzing the serial data of the electronic document, and  
generating reorganization information for use in delivering the portions of the content, the reorganization information enabling performancepresentation of the portions in an order different from the order defined by the serial data.
2. (Original) The method of claim 1 in which the serial data representing the electronic document is expressed in a markup language.
3. (Original) The method of claim 2 in which the mark-up language comprises a hypertext markup language.
4. (Original) The method of claim 2 in which the serial data representing the electronic document is expressed in an electronic mail format.
5. (Original) The method of claim 4 in which the electronic mail format includes a header and a main body.
6. (Original) The method of claim 4 in which the analyzing includes determining the start of the main body.
7. (Original) The method of claim 3 in which the hypertext markup language comprises Html.
8. (Original) The method of claim 3 in which the markup language comprises PDF,

document to a tree format.

34. (Original) The method of claim 1 in which the analyzing includes blocking major regions of the document.

35. (Original) The method of claim 1 in which the analyzing includes counting characters of text.

36. (Currently Amended) A method comprising  
at a server, receiving a request from a remote device for a portion of a document represented by serial data that contains content of the document and defines an order in which respective portions of the content are to be performedpresented on a display for viewing,  
in response to the request, returning at least one and fewer than all of the portions of the content using reorganization information that enables performancee-presentation of the portions in an order different from the order defined by the serial data.

37. (Original) The method of claim 36 also including  
receiving other requests for portions of the content of the document different portions,  
and  
in response to the requests, returning other portions of the content using the reorganization information.

38. (Currently Amended) A data structure stored on a medium and capable of configuring a machine to respond to requests for portions of a document that is represented by serial data that contains content of the document and defines an order in which respective portions of the content are to be performedpresented, the data structure comprising reorganization information that enables performancee-presentation of the portions in an order different from the order defined by the serial data.

Appl. No.: 09/851,404  
Amdt. dated 11/02/2004
